I hereby request that the Central District Health Department perform an on-site evaluation of the water and/or wastewater treatment system on the listed property. I have read and understand the above instructions and the listed information I provide is true and accurate to the best of my knowledge. **I understand the evaluation by the health department shall not be taken as a guarantee that the water/wastewater system will function in a satisfactory manner for any specified period of time. The health department assumes no liability for any damages as a result of system malfunction.**

# WATER SUPPLY AND WASTEWATER TREATMENT SYSTEM EVALUATIONS

## GENERAL INFORMATION

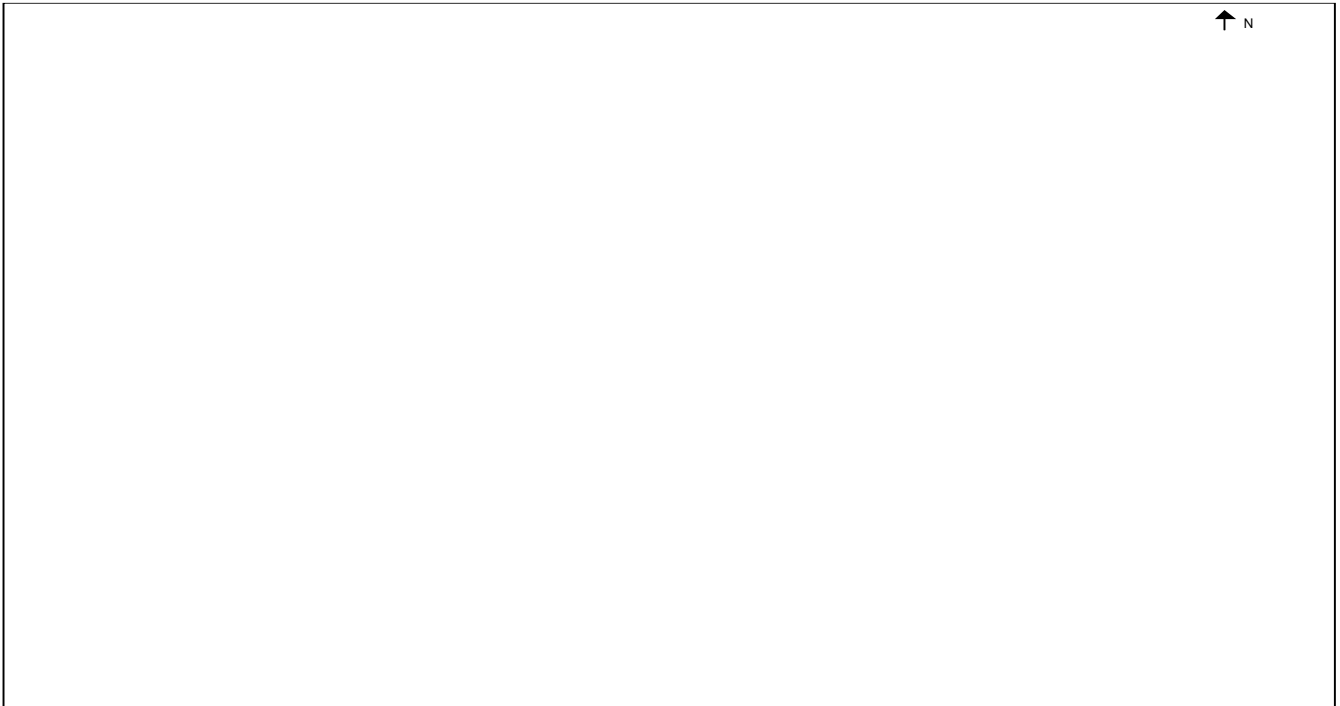

### Instructions for filling out form

The owner or owner's agent must complete all questions of this application before an evaluation will be scheduled. Water supply and wastewater treatment reports are not a requirement of the **CENTRAL DISTRICT HEALTH DEPARTMENT (CDHD)**. They are completed upon request only after application is completed. Unknown information can usually be garnished from previous owners or contractors who have worked on the property. It is the responsibility of the CDHD to make an evaluation of the system based on information provided, NOT to gather information for the applicant on the property. An inspection can be scheduled no sooner than one week from the date of the acceptance of a completed application at our department. Payment is to be made to the CDHD before an inspection can be conducted. Any incomplete applications will not be processed until all information is completed. The CDHD requires that a septic tank be pumped if ANY of the following conditions are present: unknown location of septic tank; unknown capacity of septic tank; >3 years or unknown since last pumping date or upon the determination of the inspector. No upgrades are required by the Central District Health Department, unless the current system poses a risk to public health.

### **Sketch of System:**

#### Required components:

- **Location of septic tank**
- **Location of absorption field**
- **Location of well(s)**
- **Distances between septic tank, absorption field, and well(s)**
- **Location of buildings, reference points (roads, fences, other buildings), and property lines**
- **Location of surface water, public water supplies, and any accessory components to onsite wastewater system**

### **Site evaluation report**

The role of CDHD in the inspection process is evaluation and visual inspection of system(s) for deficiencies. Inspection reports will be based on information provided on the property and/or visual inspection of system components. Occasionally, the inspection will identify deficiencies of system components (i.e. electrical conduits, well caps, broken septic lid, etc.). In these cases, the owner or owner's agent will be notified as to the problem and the allowable remedies. A satisfactory evaluation of that particular system will not be issued until the repairs are completed and inspected.

The well must meet minimum construction standards in order to be sampled. The sample must be collected by an agent of the CDHD and analyzed at our lab at no additional cost. Results may take up to 5 days for laboratory analysis. If Coliform bacteria are present or Nitrate-nitrogen levels exceed 10 mg/L, the supply will be designated as not conforming to health standards. Coliform bacteria are not necessarily harmful, but do indicate an increased risk of contamination by pathogenic bacteria. If a test is positive for bacteria, the owner/agent will be notified and instructed to make any necessary repairs, disinfect the well and schedule a resample time. Up to two resamples are included in the original fee. If a nitrate/nitrogen test exceeds 10.0 mg/L, the owner/agent will be notified and instructed on potential remedies and to schedule a resample time.
